

NEW FP-100C

INSTANT COLOR FILM

Exceptional image quality for an expanded range of commercial instant photo needs.

New instant film with exceptional image quality, ideal for a host of professional applications.

Improved response to long exposures under low lights

- New FP-100C exhibits enhanced performance during long exposures under low lights, making it eminently suited to professional applications and microscopic photography in the lab. Tonal degradation is minimized and discrepancies in sensitivity and color balance have been improved.

Comparisons with the previous type

NEW FP-100C

Enhanced resistance to light-induced discoloration

- Compared to the previous type, resistance to light-induced discoloration has been significantly enhanced (discoloration rate has been reduced by approximately 75%). The new FP-100C meets strict LNE specifications for official French ID photos.

Expanded applicable temperature range

- The lower limits of the shooting temperature range have been extended from 15° to 10° Centigrade.
- New FP-100C minimizes discrepancies in performance due to variations in temperature during development.

Environmentally considerate all-plastic pack

- Enhanced handling ease and safety when removing film from film bag
- Each pack is approximately 15% lighter
- Re-usable plastic pack eliminates need to separate components for disposal
